

# MILLWOOD

## NEW BUILD, COMMERCIAL.

This extensive project involved the design and supply of over 7500sq.m of SIP panels. The complex steel frame featured an elliptical drum design which required a curved appearance.

175mm SIPS were used and designed at 600mm centres faceted to the frame to give the required curvature for the drum section.

SIPS were fixed directly to the steel frame for both walls and roof panels.
